WORK EXPERIENCE

Machine Learning Intern **Remote**
Feynn Labs Sep 2022 – Nov 2022

- Contributed to the development of AI product prototypes and performed financial modeling to project revenue growth, aiding in informed decision-making and strategy implementation for business expansion.
- Performed market segmentation analysis for McDonald's, a $193.01B valued company in 2022, enhancing customer targeting strategies. Provided valuable insights for market growth through precise and data-driven segmentation.
- Conducted market segmentation using machine learning techniques for the Indian EV market (valued at $1.45 billion in 2021), enabling targeted customer identification and facilitating effective distribution strategies.

PROJECT EXPERIENCE

Deep Face Detection Model

- Developed a real-time face detection model using Convolutional Neural Networks (CNN) and OpenCV, with a focus on utilizing the YOLOv8 model architecture.
- Achieved a precision rate of 0.34279, recall rate of 0.47738, and an average F1 score of 0.401, demonstrating the model's excellent performance in accurately detecting faces.
- Continuously refined and optimized the model, incorporating advanced technologies to ensure accurate and efficient results in diverse scenarios.

Text Detection and Recognition

- Created a robust text detection and recognition solution by integrating EasyOCR, OpenCV, and Matplotlib libraries, allowing for efficient extraction of text from images with adjustable confidence thresholds and visual representation of detected regions.
- Implemented an algorithm to read and extract text from images, achieving accurate results with a configurable threshold.
- Utilized bounding box visualization and text annotation to highlight detected text regions in the image.

Mask Detection

- Developed a highly accurate Mask Detection system using YOLOv5, achieving a precision rate of 92.78% and a recall rate of 72.19%.
- Evaluated the model's performance using industry-standard metrics, The model achieved low box loss (0.024838), object loss (0.017628), and class loss (0.0030719), ensuring high accuracy and reliability.
- The model effectively identifies individuals wearing masks, providing crucial insights for public health and safety measures. It exhibited exceptional performance, showcasing its robustness in detecting masks across different scenarios

EDUCATION

MIT World Peace University **Pune**
Bachelor of Technology (B.Tech) | Robotics and Automation | CGPA: 8.99/10 July 2022 – May 2022

SKILLS

Programming Languages:	Python, Javascript, HTML/CSS, C-Language, SQL
Libraries/Frameworks:	Numpy, Pandas, Matplotlib, Scikit-Learn, TensorFlow, PyTorch, Keras, Mediapipe
Tools:	Git, Jupyter Notebooks, Docker, Pycharm, VsCode
Computer Vision	Image Processing, Object Detection, Computer Vision Algorithms, OpenCV
Deep Learning:	Neural Networks, Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), Natural Language Processing (NLP), LSTM.

CERTIFICATIONS

- Machine Learning Specialization (Coursera)
- Deep Learning and OpenCV for Computer Vision (Udemy)
- Google Data Analytics (Coursera)
- Artificial Intelligence (MyCaptain)
